

Definition of Test Results

- 1) **Positive** – COVID-19 (SARS-CoV-2) is present in the sample collected. They are considered contagious.
- 2) **Equivocal** – The sample was above the negative threshold, but below the positive threshold. We need to retest this patient to determine a status, but treat the patient as positive until the status can be confirmed.
- 3) **Negative** – COVID-19 (SARS-CoV-2) is NOT present in the sample collected.
- 4) **Indeterminate** – No RNA is present in the sample collected. A status cannot be reached due to the sample being invalid.
